

1451, FH); 744. *Pleospora typhae* Pass., *Typha latifolia*, 1893, Fautrey (Roum. Fung. gall. 6381, FH); 749. *Pleospora vesicaria* Pass., *Colutea arborescens*, Horto Bot., Parma, 1877, Passerini (Speg. Dac. myc. ital. 46, FH); 905a. *Pleospora bobanensis* Bub., *Veratrum lobeliana*, Boban, Aug. 1904 (BKL, ex Bubak Herb.); 971. *Sphaeria herbarum* var. *gamma* Fr., Scler. succ. 38 (E) (Lectotype); 1035. *Pleospora arundinis* Mar., *Arundinaria donacis*, Coimbra, May 1903, A. Moeller (PAD); 1051. *Sphaeria herbarum* var. *lollii*, *Lolium perenne* (PC); 1053. *Sphaeria discors* Dur. & Mont., Algeria, ex Herb. Durieu de Maisonneuve (PC); 1055. *Pleospora herbarum* var. *lollii*, *Lolium perenne*, Luc sur Mer, Sept. 1847, Desmazières 391 (PC); 1064. *Pleospora triglochonis* Br. & Har., *Triglochin palustre*, Clermont-Ferrand, April 1890, Heribaud (PC); 1067. *Sphaeria celtidis* Cast., *Celtis*, M. Castagne (PC, ex Montagne Herb.); 1068. *Sphaeria discors*, in foliis *Caricis*, Algeria, 72 (PC); 1089. *Pleospora discors*, *Carex alpestris*, Wien, Niessl (M, ex Niessl Herb.); 1113. *Pleospora herbarum* var. *minor* Niessl, *Acacia saligna*, 937 (M, ex Niessl Herb.); 1114. *Pleospora herbarum* var. *robusta* Niessl, *Donax arundinacea* (M, ex Niessl Herb.); 1116. *Pleospora occultata* Oud., *Elymus arenaria*, Scheveningen, June 1893 (GRO, ex Oudemans Herb.); 1117. *Pleospora negundinis* Oud., *Negunda fraxinifolia*, Busgen, C. J. Koning, March 1900 (GRO, ex Oudemans Herb.); 1119. *Pleospora negundinis*, *Negundo fraxinifolia*, Naarden, C. J. Koning, Feb. 1900 (GRO, ex Oudemans Herb.); 1226. *Pleospora oxycanthae* Pass. & Beltr., *Crataegus*, Sicily, 1876, Beltrani (PARMA); 1228. *Pleospora moricola* Pass., *Morus alba*, Parma, March 1884 (PARMA); 1233. *Pleospora campanula-fragilis* Pass., *Campanula fragilis*, Passerini Herb. (PARMA, 175).

*P. herbarum* is the type species of the genus, and the binomial has been used in a very broad sense for collections with 7-septate spores which show a great variety of spore size, form, coloration, and other characteristics.

Many of the isotype copies of the collection (Scler. succ. No. 38) of *P. herbarum* show no *Pleospora*, and the writer at one time (1953) suggested the abandonment of the epithet *herbarum* for that of *P. allii* Rab. Later, however (Mycologia 47:821), it was found that the copy of Scler. succ. 38 in the Royal Botanic Gardens of Edinburgh does contain material of *P. herbarum* typical of
